

Elif Sude Karan

Student

From the first day I started university, I worked actively in school clubs, which gave me a lot of things such as teamwork, organization and management, socializing, public speaking and presentation skills. I learned a lot about my department in my volunteer summer internship. The seminars I attended and the certificates I obtained gave me the skill of different thinking and perspectives in both my own field and in different fields. It is one of my advantages that my department offers English education. I think I have contributed to my personal development thanks to the entrepreneurship and personal success training I received. Also, the department of radio TV and cinema that I studied contributed a lot to me. I love improving myself, learning new things and innovation.
